## Outcome of ASIIN

a Graduates have sound mathematical knowledge. They have a profound overview of the contents of fundamental mathematical disciplines and are able to identify their correlations.
b Graduates are able to recognise mathematics-related problems, assess their solvability and solve them within a specified time frame.
c Graduates have a basic ability to work in a scientific way. They are in particular able to formulate mathematical hypotheses and have an understanding of how such hypotheses can be verified or falsified using mathematical methods.
d Graduates can flexibly apply mathematical methods of fundamental component areas of mathematics and are able to transfer the findings obtained to other component areas or applications.
e Graduates have abstraction ability and are able to recognise analogies and basic patterns
f Graduates are able to think in a conceptual, analytical and logical manner.
g Graduates have an extensive comprehension of the significance of mathematical modelling. Are able to create mathematical models for mathematical problems as well as for problems in other areas of science or everyday life, and have a selection of problem solving strategies at their disposal.
h Graduates can use basic methods of computer-aided simulation, mathematical software and programming to solve mathematical problems
i Graduates are in a position to solve more extensive mathematical
j Graduates can classify, recognise, formulate and solve mathematics-related problems
k Graduates use electronic media competently
1 Graduates can implement lifelong learning strategies. A prerequisite for this is that the students are per-severing and that they have developed persistence.
m Graduates can recognise, formulate, classify and solve problems in a mathematical context
