## B. Course Objectives and Learning Outcomes

### 1. Course Description

The course presents a set of mathematical facts and how to apply them for logical and mathematical thinking. Topics include Logic and set theory, Proof Strategy, Mathematical and Structural Induction, Types of relations and set partition, Partial Ordering, Integers and Algorithms, Complexity of Algorithms, Congruencies, Representation of Integers, Principles of Counting, Permutations, Combinations and Graph Theory.

### 2. Course Main Objective

1. Students will be able to explain and apply the basic methods of discrete (non-contiguous) mathematics in Computer Science.
2. Use logical notation to define and reason about fundamental mathematical concepts such as sets, relations, functions, and integers.
3. Evaluate elementary mathematical arguments and identify fallacious reasoning (not just fallacious conclusions).
4. Synthesize induction hypotheses and simple induction proofs.

5. Prove elementary properties of modular arithmetic and explain their applications in Computer Science, for example, in cryptography and hashing algorithms.
6. Explain and apply the knowledge of graph theory required for the Computer Science.
7. Derive closed-form and asymptotic expressions from series and recurrences for growth rates of processes.
8. Calculate numbers of possible outcomes of elementary combinatorial processes such as permutations and combinations. Calculate probabilities and discrete distributions for simple combinatorial processes; calculate expectations.

### 3. Course Learning Outcomes

| CLOs |                                                                                                                                                           | Aligned PLOs |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| 1    | <b>Knowledge and Understanding</b>                                                                                                                        |              |
| 1.1  |                                                                                                                                                           |              |
| 1.2  |                                                                                                                                                           |              |
| 1... |                                                                                                                                                           |              |
| .    |                                                                                                                                                           |              |
| 2    | <b>Skills :</b>                                                                                                                                           |              |
| 2.1  | CLO 1: Evaluate logical expressions and perform the basic operations on sets.                                                                             | S5           |
| 2.2  | CLO 2: Use the direct method, the contrapositive method, the contradiction method, and the mathematical induction to write a rigorous mathematical proof. | S5           |
| 2.3  | CLO 3: Apply logical reasoning to solve a variety of problems.                                                                                            | S5           |
| 2.4  | CLO 4: Apply a wide range of principles of discrete mathematics, such as problem solving, good thinking, choice of algorithm, and mathematical proofs.    | S5           |
| 2.5  | CLO 5: Interact with life problems using different methods of thinking and problem solving                                                                | S5           |
| 3    | <b>Values:</b>                                                                                                                                            |              |

## 2. Assessment Tasks for Students

| # | Assessment task*                   | Week Due          | Percentage of Total Assessment Score |
|---|------------------------------------|-------------------|--------------------------------------|
| 1 | Attendance and Class participation | Week 1 to 15      | 5%                                   |
| 2 | Quizzes                            | Week 4, Week 12   | 15%                                  |
| 3 | Assignments/Exercises              | Week 4, 8, 12, 15 | 20%                                  |
| 4 | Mid Term Exam                      | Week 8            | 20%                                  |
| 5 | Final Exam                         | Week 16           | 40%                                  |
| 6 |                                    |                   |                                      |
| 7 |                                    |                   |                                      |
| 8 |                                    |                   |                                      |

\*Assessment task (i.e., written test, oral test, oral presentation, group project, essay, etc.)

## E. Student Academic Counseling and Support

**Arrangements for availability of faculty and teaching staff for individual student consultations and academic advice :**

- Each student is allotted to an academic advisor for guidance and counseling.
- Available for a minimum of 2 hours per week/course, as communicated to the students.
- The student also contacts through social networking websites / Blackboard/ Email for advice and consultations

## F. Learning Resources and Facilities

### 1. Learning Resources

|                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

\* The length of time that a learner takes to complete learning activities that lead to achievement of course learning outcomes, such as study time, homework assignments, projects, preparing presentations, library times

## B. Course Objectives and Learning Outcomes

### 1. Course Description

*Catalog Description:* This course includes the following topics:

- 1) Integration Techniques: Review of Integration by Substitution and Integration by Parts, Integration of Rational Functions Using Partial Fractions, Trigonometric Techniques of Integration, and Integrals involving logarithmic, exponential, and hyperbolic functions, Improper Integrals.
- 2) Infinite series: Sequences and limit of a sequence. Infinite series of constant terms, convergence tests, alternating series and absolute convergence. Power series, the ratio test, and radius of convergence; Taylor and McLaurin series.
- 3) Vectors and Geometry of Space: Vectors in Space, Dot Product, Cross Product, Lines and Planes in Space, Cylindrical and Spherical Coordinates.
- 4) Parametric Equations and Polar Coordinates: Plane Curves and Parametric Equations, Calculus and Parametric Equations, Polar Coordinates, Calculus and Polar Coordinates.
- 5) Functions of several variables and Partial Differentiation: Functions of several variables, Partial derivatives, Total derivative, and Chain rule.
- 6) Multiple Integrals: Double and Triple Integrals in Cartesian Coordinates; Areas and Volumes, Double Integrals in Polar Coordinates; Triple Integrals in Cylindrical and Spherical Coordinates.

### 2. Course Main Objective

This course aims at giving student knowledge in fields:

1. Manipulate the integration of complicated functions and evaluate double and triple integrals.
2. Use various tests to determine series convergence and successfully solve problems involving infinite series.
3. Use polar coordinates and their applications in the parametric equations.
4. Differentiate functions of two and three variables.

### 3. Course Learning Outcomes

| CLOs |                                                                                                                      | Aligned PLOs |
|------|----------------------------------------------------------------------------------------------------------------------|--------------|
