Career Path & Intentions

I certainly enjoyed my experience in Radiotherapy and Nuclear Medicine particularly it has been in different institutions and hospitals with different Medical Cultures and allocated resources. Radiotherapy and Nuclear Medicine Technology has always been my aspiration and my life. As years passed I accumulated a tremendous amount of skills and knowledge in Radiotherapy and Nuclear Medicine, Conventional Radiology, Radiation Protection, Bioinformatics Technology, PACS, Image processing, clinically and lecturing that will enable me to provide a valuable service to the community as a Researcher and Consultant in this field. My method of translating this into day to day in clinical practice is non-exhaustible and my habit of exchanging knowledge and expertise with others in those fields is the code and secret of success.

- **Equipments** as (Intense Guided Radiotherapy requires consistent and precise definition of the target volume, clear protocols and independent delivery verification, so different types of image-guidance or imaging devices attached to and directing the localization of therapy will use. The study will base on the acquisition of fluoroscopic sequences using either Conventional or CT Simulator available at the area of the study with the facility of storage, provision and printing portal.

My Role in Researches

I could deal with all process and acquisition stages of the research from sampling preparation, measurement, characterization, analysis, discussion and papers and books publication after successful resultant research. Also I could teach and supervise the students in my specialty.
