

اسم المقرر:	فيزياء الجوامد 2
رقم المقرر:	فيز 4722
اسم ورقم المتطلب السابق:	فيز 3712
اسم ورقم المتطلب المرافق:	--
مستوى المقرر:	السابع
الساعات المعتمدة:	3 (0+0+3)
Module Title:	Solid state physics II
Module ID:	PHYS 4722
Prerequisite (Co-requisite) :	PHYS 3712
Co-requisite :	--
Course Level:	Seventh
Credit Hours:	3 (3+0+0)

Module Description

وصف المقرر :

Free electron theory (classical model of free electron, Fermi gas of free electrons, Maxwell-Boltzmann distribution, Fermi-Dirac distribution function)
 Statistical view of free electrons
 Semiconductor materials – Band theory in semiconductors – energy gap in semiconductors – holes – Fermi level in semiconductor – effect of impurities on semiconductors – applications)
 Magnetism in solid state – Superconductivity – Electrical properties of semiconductors – Electrical and thermodynamic properties of semiconductors
 Dielectric and optical properties of solids

Module Aims

أهداف المقرر :

<p>The student is expected to:</p> <ul style="list-style-type: none"> -Understand the Free electron theory (classical model of free electron, Fermi gas of free electrons, Maxwell-Boltzmann distribution, Fermi-Dirac distribution function) - Learn the statistical view of free electrons - Understand the Semiconductor materials – Band theory in semiconductors – energy gap in semiconductors – holes – Fermi level in semiconductor – effect of impurities on semiconductors – applications) - Understand the magnetism in solid state – Superconductivity – Electrical properties of semiconductors – Electrical and thermodynamic properties of semiconductors - Learn the dielectric and optical properties of solids 	
---	--

Learning Outcomes:

مخرجات التعليم:

1	Revision of the free-electron model and further details of the nearly-free electron model of electronic structure; modifications to the Fermi surface near zone boundaries. The tight binding method.	
2	- demonstrate an understanding of the semi-classical dynamics of electrons in solids - demonstrate an understanding of the Fermi surface and how it is modified by the presence of a weak crystal potential - describe the microscopic origins of the magnetic and electrical properties of solids and explain some ground-state and finite-temperature properties of ferromagnets. - Explain the physical principles for different types of electric and magnetic phenomena in solid materials (like e.g. para-electricity, dielectricity, ferroelectricity, superconductivity, paramagnetism, diamagnetism, ferromagnetism, anti-ferromagnetism etc.) and in relevant cases relate this to macroscopically measured physical quantities.	

Course Contents:

محتوى المقرر:

ساعات التدريس (Hours)	عدد الأسابيع (Weeks)	قائمة الموضوعات (Subjects)
3	1	Free electron theory (classical model of free electron, Fermi gas of free electrons, Maxwell-Boltzmann distribution, Fermi-Dirac distribution function)
9	3	Statistical view of free electrons
9	3	Semiconductor materials – Band theory in semiconductors – energy gap in semiconductors – holes – Fermi level in semiconductor – effect of impurities on semiconductors – applications)
12	4	Magnetism in solid state – Superconductivity – Electrical properties of semiconductors – Electrical and thermodynamic properties of semiconductors
6	2	Dielectric and optical properties of solids
