Chapter 1

1.Introduction

1.1 Overview

We will create website for **Al zulfi dentistry hospital** that save all data about patient and doctors , employee .

the site Provide booking or cancellation of appointments , reviews the induction record of dental doctors and working hours also display a before and after pictures of their work on dental patients also other services .

This system (HMS) provides online storage/ updating and retrieval facility.

This system promises very less or no paper work and also provides help to Doctors and patient's In this system everything is stored electronically so very less amount of paper work is required and information can be retrieved very easily without searching here and there into registers

The new service in the website is After adding an appointment and opening a file a specific number will show and in the appointment page will be a table of days of the week with the work days shown, and all patients numbers , for example if you were number 15 on Monday 10:00 AM , and the doctor is finished with patient number 14 at 9:15 , a message will be sent and in this case either an appointment will be opened for the 10:00 or any other patient that may come

the system development :

Package Includes JavaScript JS, HTML, CSS, PHP, SQL,

Compatible Browsers Firefox, Chrome, Safari,

1.2 problem definition

when open history of patient the terminology used is not medical like Dental caries(DC) is represented as CL. So, many doctor face problem in identifying the correct terminology .we want to write medical terminology for the patients problem so any doctor can identify the problem quickly.

if Doctor want to open data graph (x-ray) you need to open first patient file to view data graph .which is time consuming we want to integrate the system with database

So ,Any doctor can view all the data grams directly from database and also take Appointments or cancel will be available another problem sometimes patient cant contact whit doctor . so the website will provide this service that can patient contact whit the doctor no need to go hospital also Preparation of accurate and prompt reports This becomes a difficult

task as information is difficult to collect from various registers.

1.3 goals

Low scheduling problems , Ease of dealing and organization .

1.4 Objectives

Make a easy communication between patient and doctor also integrate system , so that directly you can view data graph from database.

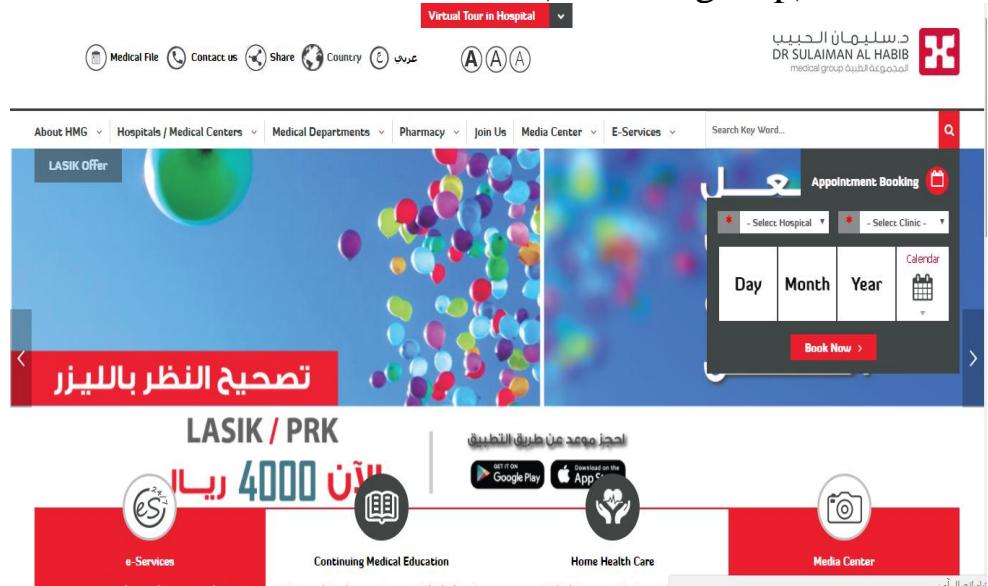

include medical terminology so any doctor can analyze the summary .

1.5 system Benefits

- computerize all details regarding patient details & hospital details .
- Online appointment is the new trend and also a time-saving process for the patient as well as the dentist .
- map facility on the website, help the patient to know Hospital exact location and allow them to accurately and hassle free and on time.

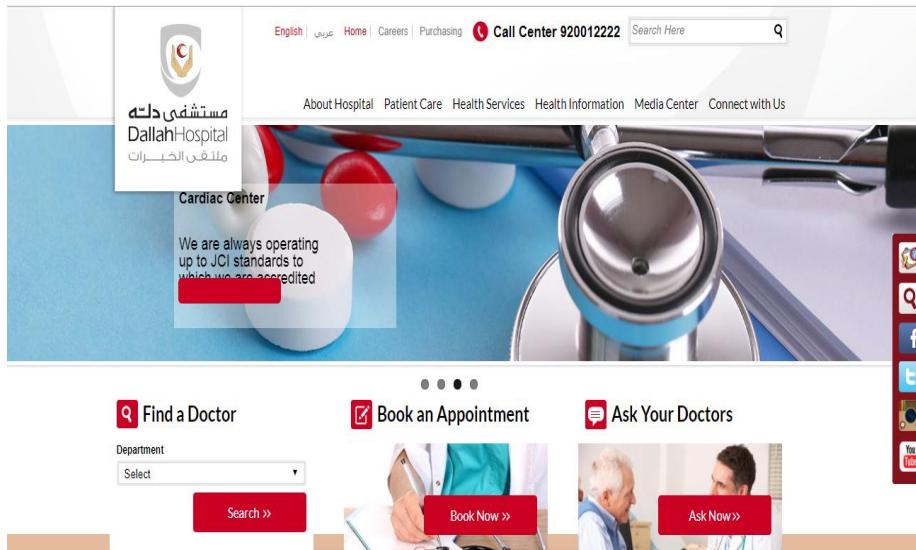

1.6 literature survey

Dr suliman al habib (medical group)

the website provides a lot of services and options to the patients and the most important electronic service is ask doctor , appointment , laboratory result , rate doctor radiology result.
Dr suliman al habib (medical group) is private sector which means is not from Saudi government .

dallah-hospital

also we have this website "dallah hospital" the electronic service not so different if we compare dallah hospital and Dr suliman al habib (medical group) In terms of electronic services both almost have same servicer but dallah hospital have New service which (Patient Rights and Responsibilities) if any Patient read this on that website will understand the Rights .

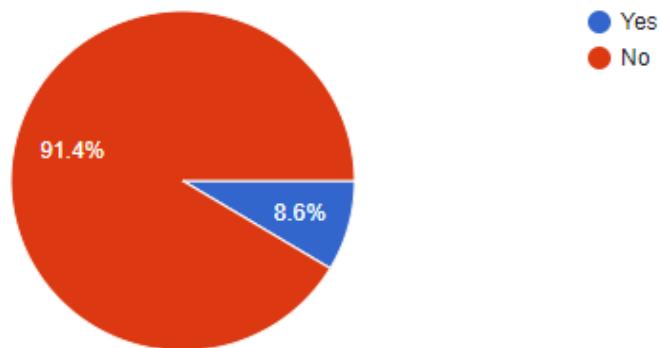

1.6 Feasibility study :

— The Feasibility study clarify how the project important to the patient and if we can complete it successfully ,and how much they need this website .

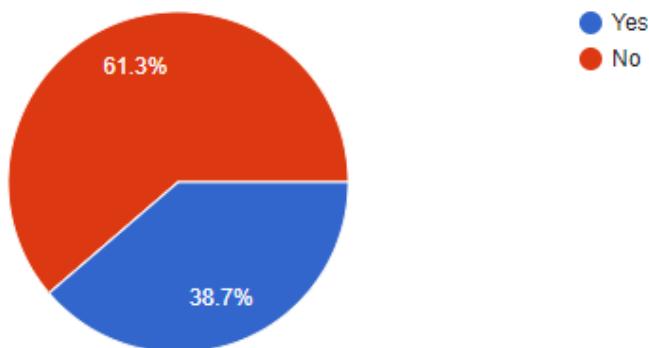

the survey based on varied question , cover a diverse range of ideas, and we asked basic questions .

— which was

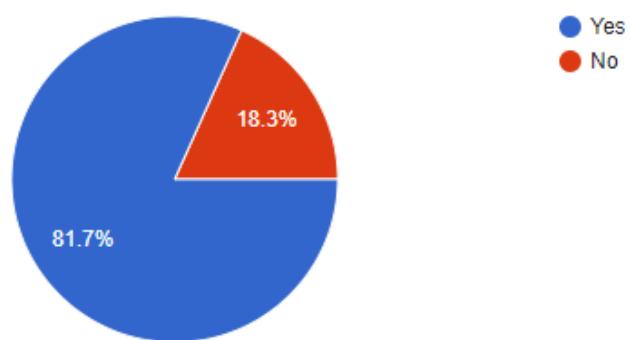

— 1- are you a doctor ?

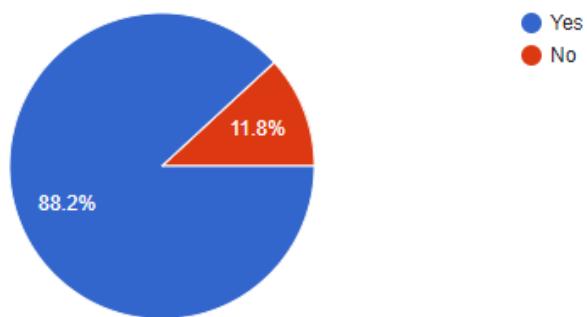

2- do you Have any issues to open your patient file in hospital?

Do you want to contact whit doctor personally ?

Do you think there should be a website " dentistry clinic for alzulfi hospital "?

1.8UML Diagrams

Class Diagram

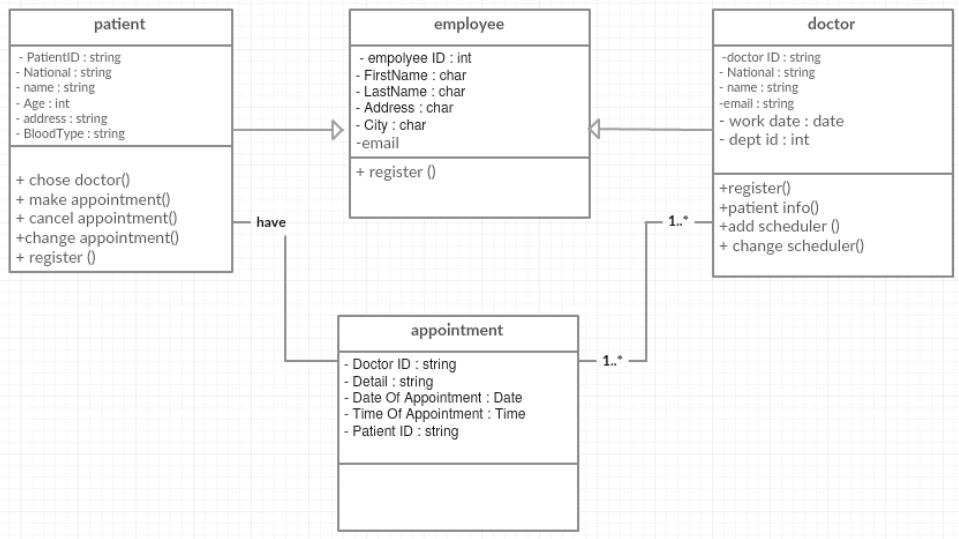

Figure 1class diagram

Each class is drawn by using three part-rectangles with the class's name at the top, attributes in the middle, and methods (also called operations) at the bottom.

this diagram clarify the attribute and operations for doctors , patient , appointment , employee . also explain the relationship between them .

as example we need ID doctor and his nationality , name , email ,work, department id this about attribute

in operation doctor can register , view patient info , add scheduler ..

Object diagram

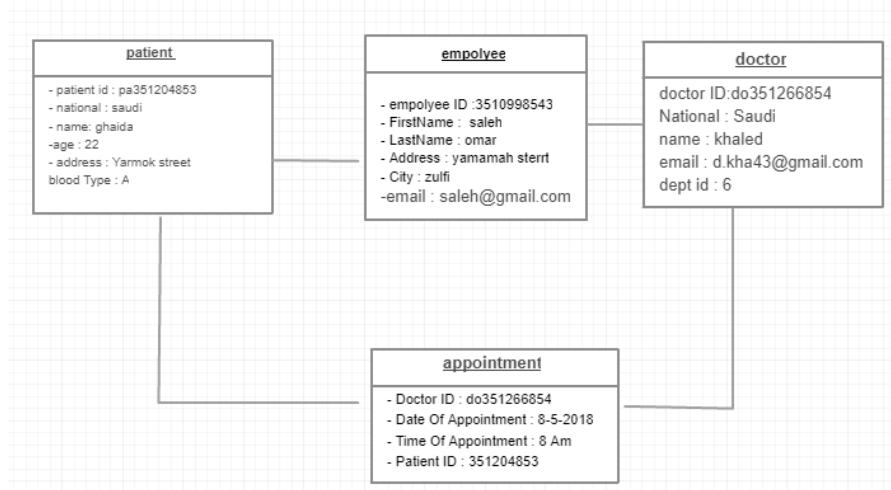

Figure 2object diagram

object diagram focuses on some particular set of objects and attributes, and the links between these instances. A correlated set of object diagrams provides insight into how an arbitrary view of a system is expected to evolve over time

object diagram explain exactly the type of attribute

for example doctor id , employee id , patient id have a unique number.

Sequence diagram

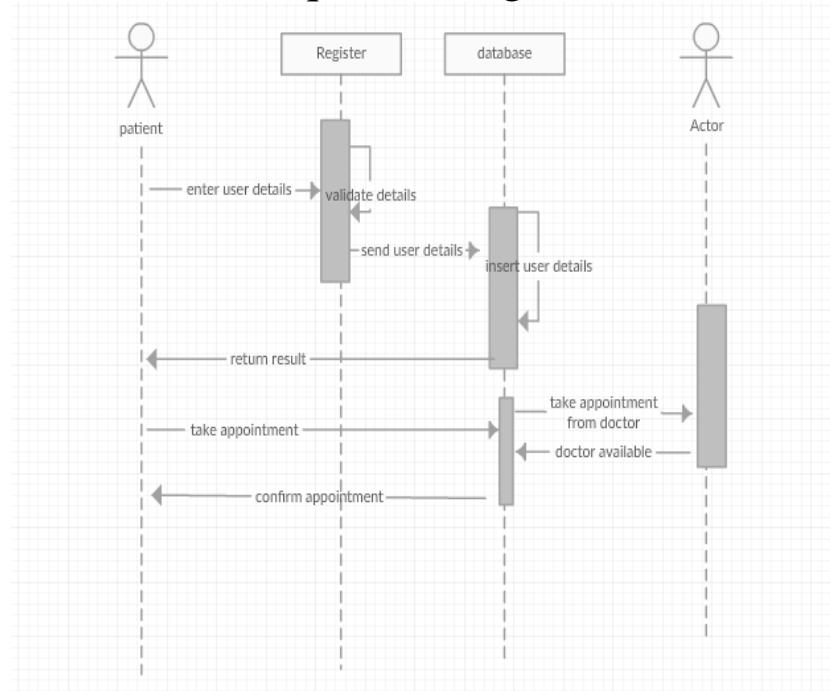

Figure 3sequence diagram

A sequence diagram is a dynamic model that supports a dynamic view of the evolving systems. It shows the explicit sequence of messages that are passed between objects in a defined interaction..
 Patient file , employee and doctor information
 all the details will store on database .

Use case diagram

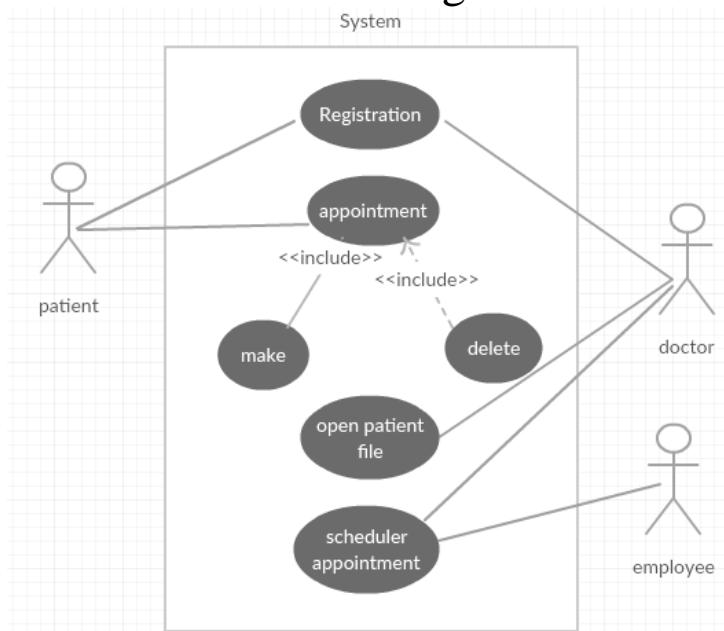

Figure 4Use case diagram

use case diagram is graph of actor , a set of use cases enclosed by a subject boundary , association between the actor and the use case , relationship among the use case , and generalization among the actor .

This diagram show the relationship between patient and doctors .

Patient can registration and make appointment , and doctor can view patient file , scheduler appointment .

Activity diagram

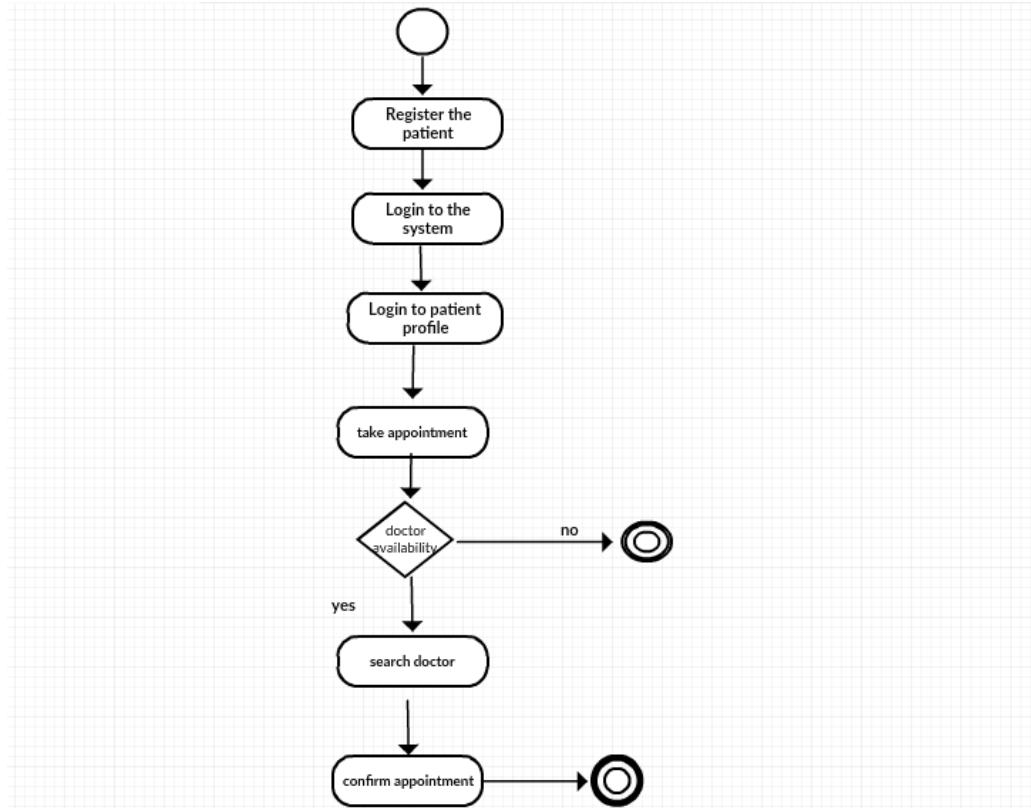

Figure 5 Activity diagram

An activity diagram is represented by shapes that are connected by arrows. Arrows run from activity start to completion and represent the sequential order of performed activities. Black circles represent an initial workflow state. A circled black circle indicates an end state.

This diagram shows steps how to take appointment

Start from register then login etc.

the basic point is check the availability .

Chapter 2:

2.1 ER diagram .

An **entity–relationship model (ER model)** for short) describes interrelated things of interest in a specific domain of knowledge. A basic ER model is composed of entity types (which classify the things of interest) and specifies relationships that can exist between instances of those entity types.

Table 6 WORK HOURS

Chapter 3 .

3.1 DFD diagram

A data flow is a single piece of data (e.g., quantity available) (sometimes called a data element), or a logical collection of several pieces of information (e.g., new chemical request). Every data flow should be named with a noun. The description of a data flow lists exactly what data elements the flow contains. For example, the pick-up notice data flow can list the LCA name, chemical, and quantity requested as its data elements. Data flows are the glue that holds the processes together. One end of every data flow will always come from or go to a process, with the arrow showing the direction into or out of the process. Data flows show what inputs go into each process and what outputs each process produces. Every process must create at least one output data flow, because if there is no output, the process does not do anything. Likewise, each process has at least one input data flow, because it is difficult, if not impossible, to produce an output with no input. There are four symbols in the DFD language (processes, data flows, data stores, and external entities), each of which is represented by a different graphic symbol.

صحة فم وأسنان المرأة الحامل

نبذة مختصرة :

- تحدث أثناء الحمل العديد من التغيرات الجسدية مما قد يؤثر في صحة الفم.
- تغير العادات الغذائية والتغيرات الهرمونية هي أكثر أسباب مشاكل الفم والأسنان شيوعاً أثناء الحمل.
- من أكثر مشاكل الفم والأسنان التي قد تحدث: التهاب اللثة، تآكل وتتسوس الأسنان، أورام الحمل الحميدة في منطقة اللثة.
- يجب إخبار طبيب الأسنان عن الحمل قبل البدء بعمل أي جراء.
- يجب الحرص على العناية بالأسنان أثناء الحمل أكثر من أي وقت.

مقدمة :

الحمل هو فترة فريدة من حياة المرأة، حيث يحدث فيها العديد من التغيرات الجسدية مما قد يؤثر في صحة الفم، وفي الوقت نفسه تتدنى صحة الفم والأسنان هي المحتاج للمساحة بشكل عام، حيث إن المرأة والتخدير والعلاج تكتين ممارسات أمينة وعالية لتحسين صحة المرأة الحامل، بالإضافة إلى أنها مهمة لصحة الجنين أيضًا.

تم إنشاء مركز طب و جراحة الأسنان بمستشفى الزلفي في عام ١٤٣١ هـ و يحتوي المركز على مجموعة من العيادات التخصصية و عددها ٤ بالإضافة لعيتين عاملتين لتشخيص و علاج مشاكل الأسنان كما يحوي المركز على معمل أسنان لعمل تراكيب الأسنان المتحركة و الثابتة ، كذلك يوجد غرفة تعلم متكاملة لتعليم الأدوات المستخدمة و غرف انتظار نساء و أخرى للرجال تحتوي على شاشة عرض توغرافية

4.7 Report Layouts:

This screenshot shows the patient registration page of the Saudi Ministry of Health website. At the top, there is a navigation bar with the VISION 2030 logo, a search bar, and the Ministry of Health logo. Below the navigation bar, there are two main buttons: 'تسجيل جديد' (New Registration) and 'تسجيل دخول' (Login). The main form area contains five input fields labeled 'رقم الهوية' (ID Number), 'الاسم الأول' (First Name), 'الاسم الثاني' (Second Name), 'الاسم الأخير' (Last Name), and 'الجنسية' (Nationality). Each field has a placeholder text and a small icon.

in this interface we create account (patient , doctor , employee)
the information we should write user ,email and password .. etc after the user write this information,
will the Account successfully added.

This screenshot shows the appointment management page of the Saudi Ministry of Health website. At the top, there is a navigation bar with the VISION 2030 logo, a search bar, and the Ministry of Health logo. Below the navigation bar, there are two main buttons: 'حذف موعد' (Delete Appointment) and 'إضافة موعد' (Add Appointment). The main form area is titled 'مواعيدي' (My Appointments) and lists two appointments. Each appointment row includes columns for 'الحالة' (Status), 'الطبيب' (Doctor), 'الوقت' (Time), and 'التاريخ' (Date). To the left of each appointment row are two purple 'Delete' buttons. The first appointment is for Dr. Mohamed Al-Zayyat at 12:00 - 11:30 on 2019-03-04. The second appointment is for Dr. Mohamed Al-Zayyat at 14:30 - 14:00 on 2019-03-01.

Patient interface after login show us the service to add appointment or cancel it.

مواعيدي

لا توجد مواعيد اليوم

Doctor interface after login show us the service see if there is appointment or not .

إدراج مواعيد الأندرويد

مواعيد اليوم

لا توجد مواعيد

Employee interface after login show us the service and the ability to add appointment depend on doctor days and hours work .

Chapter 6 .

6. Conclusion and Future Work

6.1 Conclusion:

generally this website very important in any work environment especially hospitals , because of the needed to organize the appointments and times work , also to get connection way between doctors and patients, and the main service in the website is booking appointment and cancel it any time , , also this website help employee to edit all the information and viewed it easy way , whit save the time and papers .

6. 2Future Work:

the website need more work to be more efficiency , also we need more privacy and development and protect the database , in the future we should add more services , admin page , profile page for the doctors and patients , also page to vote for doctors after the appointment depends on patients opinion and his notes ,
also Appointment reminder service , also live chat between the patients and doctors program application for ios and android system
